zos.inc

```
;;; zos.inc
;;; a lightweight, small-footprint, preemptively multitasking RTOS for Microchip
;;; Technology's entire enhanced midrange 8-bit PIC microcontroller family:
;;; jobs (up to 5) are never allowed to manipulate the BSR directly, as that is
;;; the prerogative of zOS (it being used as the current job #) and the bank may
;;; never end up greater than zOS_NUM in user space with interrupts enabled!!!
;;; memory footprint:
;;; ~613 14-bit words for base RTOS i.e. main() starts at 0x0263
;;; ~511 words if zOS MIN is defined to omit FRK/EXE/FND (thus SWI#4~7=zOS YLD)
;;; SRAM footprint:
;;; 86 bank-0 bytes claimed by RTOS, 30 bytes of stack scratch space relocatable
                                            local bytes/job (+any heap, besides
;;; available bytes
                      possible jobs with
;;; on PIC device
                       80 bytes RAM each
                                             2 global bytes) if zOS_NUM set to 5
;;; ==========
